

INTERNATIONAL SAFETY SYSTEMS INC.

Your Source for Safety

DO YOU COMPLY WITH THE LATEST SAFETY STANDARDS?

AIRBORNE HAZARDS AND RESPIRATORY PROTECTION

Are your employees fit tested annually? Is there a written procedure and adequate training in place? If these key program elements are missing, you may be subject to fines and expose workers to unnecessary illness or injuries.

Selecting the proper gas monitor is not always simple. Get to know the latest technology and ensure you get hands-on training with your instruments.

Every user needs to know how to bump test daily and calibrate the instrument in the field to comply with the most current OHS regulations. Writing down results is essential to proving due diligence.

Choosing the proper level of respiratory protection requires expert advice.

Proper hazard analysis, consulting your MSDS and knowing the available products are critical steps in product selection.
